SUMMARY

Full Stack & AI Developer (MERN, Next.js, FastAPI, Python, AWS) with working knowledge of Generative AI, RAG, and agentic AI. Shipped a production AI hiring platform load-tested at 500 concurrent users, and portals used by 180+ people at 100% accuracy.

EDUCATION

Ajay Kumar Garg Engineering College, Ghaziabad 2024 – 2028
B.Tech in Computer Science CGPA: 7.5

EXPERIENCE

AxioraPeople **September 2026 – Present**
Full Stack & AI Developer Intern, Remote

- Built EdTalent, an AI hiring platform on React 19, FastAPI and PostgreSQL (**150+ APIs**) with agentic AI resume screening at **Rs 0.09 per resume**, proctored voice AI interviews at **Rs 4.87 each**, LangGraph sourcing, a calling bot, WhatsApp and email alerts, and 5-tier pricing.
- Deployed on **AWS** (ECS, ALB, SQS, RDS, ElastiCache, CloudFront) with Terraform and CI/CD for **Rs 12.5k/month** at 1,000 users; load-tested **500+ concurrent users and 47,000+ requests with 0 server errors**.
- Improved SEO, AEO and GEO with prerendered pages (SSG), structured data, sitemaps and AI-crawler access, cutting first page load by **64%** and ranking EdTalent **#1 on Google** for its brand search.

Cloud Computing Cell, AKGEC **October 2025 – Present**
Web Developer (Part-time), Ghaziabad, India

- Developed the Nimbus 3.0 Registration Portal & Verification Dashboard, the Probation Management Portal, and the NextGen Assessment coding platform using **React.js, Next.js, Node.js/Express.js, MongoDB/PostgreSQL**; contributed to the official CCC website.
- Added secure authentication, **role-based access for 3+ user roles**, and automated email notifications; managed **180+ registrations at 100% accuracy** and enabled trainees, admins, and senior developers to track **progress evaluations across six domains**.

Open Source Contributor | Podman (Red Hat), stdlib, Zulip **September 2026 – October 2026**

- **Podman** (Red Hat container engine): Fixed a broken docs link, **8 typos** and missing image alt text across React/TypeScript components, improving **screen reader accessibility** (PR #668, #674).
- **stdlib** (**JavaScript** numerical computing library): Fixed a **data-integrity bug** where the array `with()` method mutated its source and misplaced writes on buffer views; added **regression tests for 3 cases**, merged after maintainer review (PR #16346).
- **Zulip** (open-source team chat): Corrected incorrect user-list settings in the status **help documentation**, merged into main (PR #40479).

PROJECTS

Fire Detection System | React.js, Express.js, Mapbox GL, Socket.io, Supabase | Demo | GitHub **April 2026**

- Ingested global **NASA FIRMS** satellite data (**VIIRS 375 m**, refreshed within **3 hours** of satellite overpass) and ranked regions by fire probability on a **Mapbox GL** dashboard, so responders see top-risk zones in **seconds instead of manual searching**.
- Integrated a **predictive risk layer** into the **Node.js/Express.js** backend and **Mapbox GL** dashboard to cover **satellite blind spots**, **reducing monitoring gaps** between passes, and simulated **drone** dispatch with live feed on **Mapbox GL** and **Three.js** 3D terrain.
- Verified detections with **OpenCV + Python** AI on live camera and **CCTV** feeds, plus admin **image upload** and **AI test runs** to filter false alarms, with **Socket.io** alerts in **under 1 second**, **80% faster than 5-second polling**.

NextGen Assessment Systems | React 19, TypeScript, Node.js, MongoDB, Redis, BullMQ, AWS ECS | Demo | GitHub **August 2026**

- Architected a full-stack platform end-to-end for **300+ candidates**, **250+ concurrent sessions**, **zero latency spikes**, **$50 budget**, with an Admin Console for bulk Excel/CSV ingestion (**SheetJS + Multer**), live monitoring, proctor messaging, force-submit, and auto-evaluation.
- Implemented MCQ sync via **Redux + localStorage** with exponential retry and jittered auto-submit for **250+ concurrent sessions**, and ran self-hosted **Judge0** behind a custom **Round-Robin Load Balancer** with health checks, **BullMQ + Redis** async queues, and **SSE** live results.
- Deployed on **AWS ECS + ALB** with **CQRS microservices** and a **MongoDB Replica Set** with failover and read offloading (**40% throughput gain**), secured via **AWS WAF, CloudFront, Cloudflare Tunnels**, and **GitHub Actions CI/CD**.

SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, Go, Java, C++, SQL, Data Structures & Algorithms
Frontend: HTML5, CSS3, React.js, Next.js, React Native, Redux, Tailwind CSS, Framer Motion, Mapbox GL, Three.js
Backend: Node.js, Express.js, FastAPI, REST APIs, GraphQL, WebSockets, Socket.io, SSE, BullMQ, JWT, OAuth 2.0, RBAC
Architecture: Microservices, CQRS, DDD, Event-Driven Architecture, Serverless, Kafka, SQS, System Design
Databases: MongoDB, PostgreSQL, Redis, Supabase, Database Indexing, Aggregation Pipelines
AI & GenAI: Generative AI, RAG, Agentic AI, LangChain, LangGraph, Voice AI, Context Engineering, AI-Assisted Development, OpenCV
Cloud & DevOps: AWS (EC2, ECS, ALB, S3, SQS, RDS, ElastiCache, CloudFront, IAM), Terraform, CloudWatch, Docker, CI/CD
Testing & Tools: TestSprite, Jest, Load Testing (Locust, k6, Artillery, JMeter), Postman, Git, GitHub, Linux, Cursor AI, Codex, MCP

CERTIFICATIONS & ACHIEVEMENTS

- Hackathon participant at Daksh Sparkfest, RIFT, and HyperSpace Hackathon | StaxTech Internship Certification – completed industry internship.
- Full Stack Web Development Certification – 6-week job-oriented training by **CodeSquadz** in collaboration with **AKGEC** (June – July 2026).
